Minimum intrusion Grid

P-Cubed and CINEMA workshop

MINIMUM INTRUSION GRID

Jonas Bardino <bardino@nbi.ku.dk> NBI eScience University of Copenhagen

The Grid

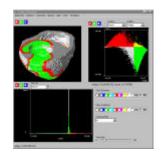

- 'Internet' mainly allows access to separate information, resources
- The Grid should provide unified access to any desired resource
 - Processing
 - Storage

H

- Applications
- People
- Sharing, collaboration

 Virtual organizations

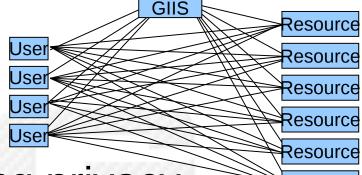

Problems in Classic Grid Models?

(not every problem in every middleware)

- Single point of failure
- Lack of scheduling
- Poor scalability

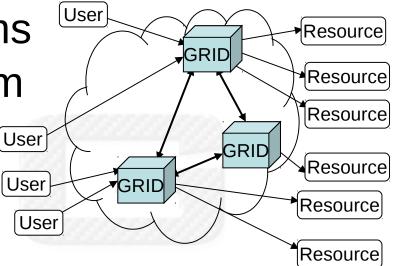

- No means of implementing privacy
- No means of utilizing 'cycle-scavenging'
- Firewall dependencies
- Highly bloated middleware
- Cumbersome user collaboration
- Steep learning curve
- Ad-hoc application access

Resource

Minimum intrusion Grid - Idea

- Address 1st gen. problems
- GRID should be a system
 - not just a protocol
 - servers that are GRID
 - coordinated upgrade

- Users and resources do not have to maintain anything
- Appears as big virtual computer to users
- Appears as group of users to resources

Why is GRID Needed?

• Science & business go virtual

- A lot of areas turn to computer simulations
- More, bigger and cheaper experiments
- Data mining
- Computer power is consolidated in data centres
 - Avoid user maintenance
 - Better utilization \rightarrow cheaper
 - Users need easy access
 - Providers need access control

MiG Rules

- i. Nothing produced by MiG can be **required** to be installed on either the resource or client end
- ii. Everything within MiG must be implemented in Python unless another language is absolutely required
- iii. Any design and implementation decision must optimize towards transparency for the users
- iv. Anything that is not right must be thrown away

MiG Requirements - User

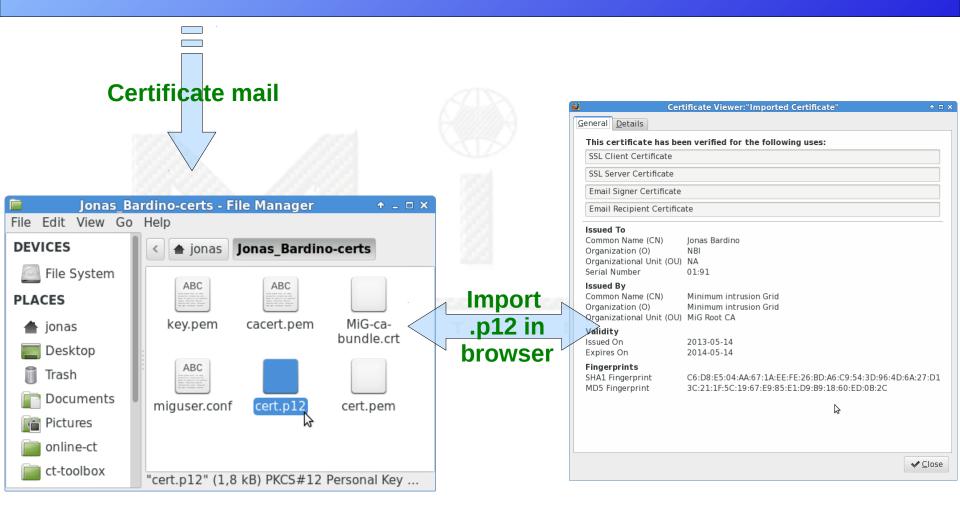

- Users don't need to install Grid software
 - A web-browser is enough
 - X.509 certificate for identification/access
- Optional advanced interfaces
 - User scripts
 - Client APIs
 - Remote file system
 - Native clients

Request User Certificate

Mig	Minimum intrusion Grid										
🗖 Dashboard	Dashboard										
🇱 Submit Job											
🚍 Files	Welcome to the Minimum intrusion Grid										
💠 Jobs	Hi Jonas Bardino										
📩 VGrids	This is your private entry page or your dashboard where you can get a quick status overview and find pointers to help and document on. When you are logged in with your user										
Resources	certificate, as you are now, you can navigate your pages using the menu on the left.										
💁 Downloads	Your Status										
🗊 Runtime Envs	This is a general status overview for your Grid activities. Please note that some of the numbers are cached for a while to keep server load down.										
A People	You have submitted a total of 278510 jobs: 0 parse, 0 queued, 1 frozen, 0 executing, 267941 finished, 0 retry, 9987 canceled, 0 expired and 581 failed.										
✓ Settings	4340 resources providing 4687 execution units in total allow execution of your jobs.										
Docs	ಸೈ≽ Loading disk stats										
	Your user certificate expires on Wed May 14 2014 10:08:40 GMT+0200 (CEST).										
	Documentation and Help										
	Minimum intrusion Grid includes some built-in documentation like the										
	Docs page										
	but additional help, background information and tutorials are available in the										
	external Minimum intrusion Grid documentation										
	Personal Settings										
	You can customize your personal pages by opening the Settings page from the navigation menu and entering personal preferences. In that way you can completely redecorate your interface and configure things like notification, profile visibility and remote file access.										

MiG Requirements - Resource

- Resources don't need to install Grid
 software
 - Only create MiG user(s)
 - Provide limited remote access
 - ssh inbound
 - https outbound

- System administrators use ordinary X.509 user certificates to manage resources
- Sandboxed systems have even fewer requirements

Resource Owner View of MiG

Jobs

- The Grid work unit is jobs
 - Typically batch command(s)
 - Including resource specs
 - User input/output files

- Replication (if enabled)
- Execution when a suitable resource is ready
- All job handling is done by MiG
- User may override jobs: hold, cancel, resubmit
- Grid apps typically wrap jobs to create flow

Runtime Environments

- •Resource and user 'contract'
 - without them almost nothing is guaranteed
 - used to negotiate apps and libs in a generic fashion
 - anyone can define them, but only resource owners can specify which ones they implement and how
 - no spec update is possible, always create new
- Examples
 - PYTHON-2.X-1 (any Python 2.X interpreter)
 - resource owner specifies PYTHON=/path/to/python
 - user knows that \$PYTHON contains actual path in job
 - Local files, devices or markers
- Managed by resource owners

Runtime Environments: () help AMBER-10.X-1 AMDGPUPERF-1.X-1 BASH-ANY-1 BIBTEX-ANY-1 CIL-2.0.X-1 CT-TOOLBOX-1.X-1

 Online CT
 Online CT Scanning

Welcome to the public Online-CT page!

Online-CT is a project focused on developing and building a solution for efficient analysis and cutting of pork carcasses in slaughterhouses. The analysis is based on CT scanning and online reconstruction of the intersection images in the actual production line, so the results must be available within seconds in order to keep up with the flow. As an example the intersection image below could result in detector readings as visualized in the sinogram, and we can then use e.g. filtered back projection to obtain an estimate of the actual intersection. This sinogram was obtained through a forward projection with the target image, but in the real setup we will only have the detector readings from the CT scan.

The sinogram and reconstructed image above are from a high resolution scan, so the reconstruction yields a result quite close to the real image. However, the cost of such a high resolution setup and the time taken to reconstruct the image probably doesn't fit the project requirements and limits. Thus we investigate methods of reconstructing images with scanners that use a lower resolution to remain cost competitive while providing sufficient image quality. The reconstruction can be tuned to compensate for the lower resolution at the cost of more calculations.

Members of the Online-CT virtual organization can additionally access the Online-CT members portal with further details and Live Simulation. Please request a MiG user certificate and Online-CT VGrid membership if you want access, but get an error from the link above.

Resource Models

Conventional resources

- Like all other Grid systems, only easier
- Basic user accounts with (restricted) ssh access from MiG servers
- Compute and external storage nodes

• MiG-SSS

- A very powerful screensaver
- Virtualised minimal Linux distro

PS3-live

- Minimal Linux Live CD for PlayStation3
- One-Click
 - The simplest possible way to contribute
 - Web page with java applet

Mig	Minimum intrusion Grid	
🗖 Dashboard	Settings	
🗱 Submit Job		
🚍 Files	🔟 general settings , 🎲 job settings , 🧐 style settings , 🚨 profile settings , 🗔 widgets settings , 🧱 ssh settings	
🗱 Jobs	SSH/SFTP access to your MiG account	
📩 VGrids	You can configure SFTP login to your MiG account for efficient file access. Login takes place with public key or password and your automatic username:	
Resources	L0M9REsvUlQ9TkEvTD10QS9PPU5CSS9PVT10QS9DTj1Kb25hcyBCYXJkaW5vL2VtYWlsQWRkcmVzcz1iYXJkaW5vQG5iaS5rdS5kaw	
ڬ Downloads	You can use any existing SSH/RSA key, including the key pem you received along with your user certificate, or create a new one. In any case you need to save the conte	nts of
🗊 Runtime Envs	the corresponding public key (X.pub) in the text area below, before you can connect as described in the following sections.	
🛃 People	Graphical SFTP access	
🖋 Settings	The FireFTP plugin for Firefox is known to generally work for graphical access to your MiG home over SFTP. Enter the following values in the FireFTP Account Manager:	
Docs	Host dk.migrid.org Login LOM9REsvUlQ9TkEvTD10QS9PPU5CSS9PVT10QS9DTj1Kb25hcyBCYXJkaW5vL2VtYWlsQWRkcmVzcz1iYXJkaW5vQG5iaS5rdS5kaw Password YOUR_KEY_PASSWORD_HERE Security SFTP Port 2222 Private Key ~/.mig/key.pem	
	other graphical clients may work as well.	
	Command line SFTP/SSHFS access on Linux/UN*X	
	Save something like the following lines in your local ~/.ssh/config to avoid typing the full login details every time: Host dk.migrid.org Hostname dk.migrid.org User L0M9REsvUlQ9TkEvTD10QS9PPU5CSS9PVT10QS9DTj1Kb25hcyBCYXJkaW5vL2VtYWlsQWRkcmVzcz1iYXJkaW5vQG5iaS5rdS5kaw Port 2222 IdentityFile ~/.mig/key.pem From then on you can use sftp and sshfs to access your MiG home: sftp dk.migrid.org

MiG Conclusions

- MiG is 'feature complete'
- Easy to use, transparency
 - users / resource owners
- Flexible resource sharing
- Dynamic collaboration tools
- Application platform
